OBJECTIVE

Software Developer focused on Back-end, Artificial Intelligence, and Automation, seeking to work on developing scalable solutions using modern technologies.

EDUCATION

Bachelor's Degree in Computer Science – Federal University of Maranhão (2021 - 2026)

SKILLS

- **Languages:** Python, Java, C, JavaScript, and TypeScript
- **Back-end:** REST APIs, PostgreSQL, and MySQL
- **Artificial Intelligence:** LangGraph, LangChain, RAG, OpenAI, Gemini, TensorFlow, and Keras
- **Cloud and DevOps:** Docker, Git, GitHub, AWS, and Google Cloud Platform
- **Automation and Integrations:** n8n
- **Front-end:** HTML, CSS, React.js
- **Languages:** English (Advanced), Spanish (Intermediate), French (Intermediate), and Libras (Basic)

PROFESSIONAL EXPERIENCE

Software Developer | Zappts | Jan 2026 – Present

- Development of conversational agents using LangGraph and language models (LLMs) for channels such as WhatsApp and Microsoft Teams.
- Implementation of integrations with Salesforce and corporate systems via REST APIs, automating business processes.
- Back-end development in Python, participating in the evolution of architecture, infrastructure, and best practices in a Google Cloud Platform (GCP) environment.
- Utilization of PostgreSQL, Docker, Git and GitHub in the development and maintenance of solutions.
- Acting in an agile team (Kanban), collaborating with Developers, Product Owner, and QA throughout the development lifecycle.

Backend and AI Intern | Zappts | Mar 2025 – Jan 2026

- Development of Artificial Intelligence agents using n8n for process automation.
- Building integrations using REST APIs and AWS services (Lambda, API Gateway, S3, DynamoDB, and Amazon Transcribe).
- Development of interfaces in React and automation logic in JavaScript.
- Creation and optimization of prompts for generative AI applications.
- Utilization of Git, Jira, and Confluence, in addition to the production of technical documentation and sequence diagrams.

Scientific Initiation Research | Applied Computing Center | 2022 – 2023

Project: Generation of medical exam reports based on medical images using Deep Learning.

- Development of models using TensorFlow and Keras.
- Data manipulation and analysis using Python.
- Model tuning and analysis of metrics for optimization.
- Scientific documentation using LaTeX.
- Presentation of research at the 2023 Scientific Initiation Seminar.
